

Dear Property Owner,

The City of West University Place has initiated the design of a project that will make improvements to the drainage system in your area. The improvements were recommended after the completion of the 2021 Citywide Drainage modeling study and the preliminary engineering report (PER). Through the work of HDR Engineering and City Staff, this project has reached the 75% design milestone.

In response to the questions received at the Town Hall Meeting in August we would like to gather additional information regarding resident's special needs that may be affected throughout this project. To gather this information we have created an online form for residents to provide us with their information and to identify their special need request. You can find this form by visiting:

**[www.westutx.gov/specialrequest](http://www.westutx.gov/specialrequest)**

Special requests must be submitted to the Public Works Department by **Friday, November 4.**

Key components of this project include:

- Removal and replacement of the roadway pavement along areas of University, Duke, Wakeforest and Rice. (see project map)
- Installation of box culverts and inlets to improve drainage
